Key Findings & Conclusions

# Introduction

**Vanguard<sup>®</sup>**

# Data Overview

**Vanguard**<sup>®</sup>

- Who: df\_final\_demo
- How : df\_final\_web
- Experiment design: df\_final\_experiment

data cleaning and merging process:

- Cleaning: calculated the time taken per step
- Merged all data into one big DataFrame for easy import into Tableau

# EDA: demographic client analyses

age categories:

1st peak at 30 years

2nd peak at 55 years

tenure categories:

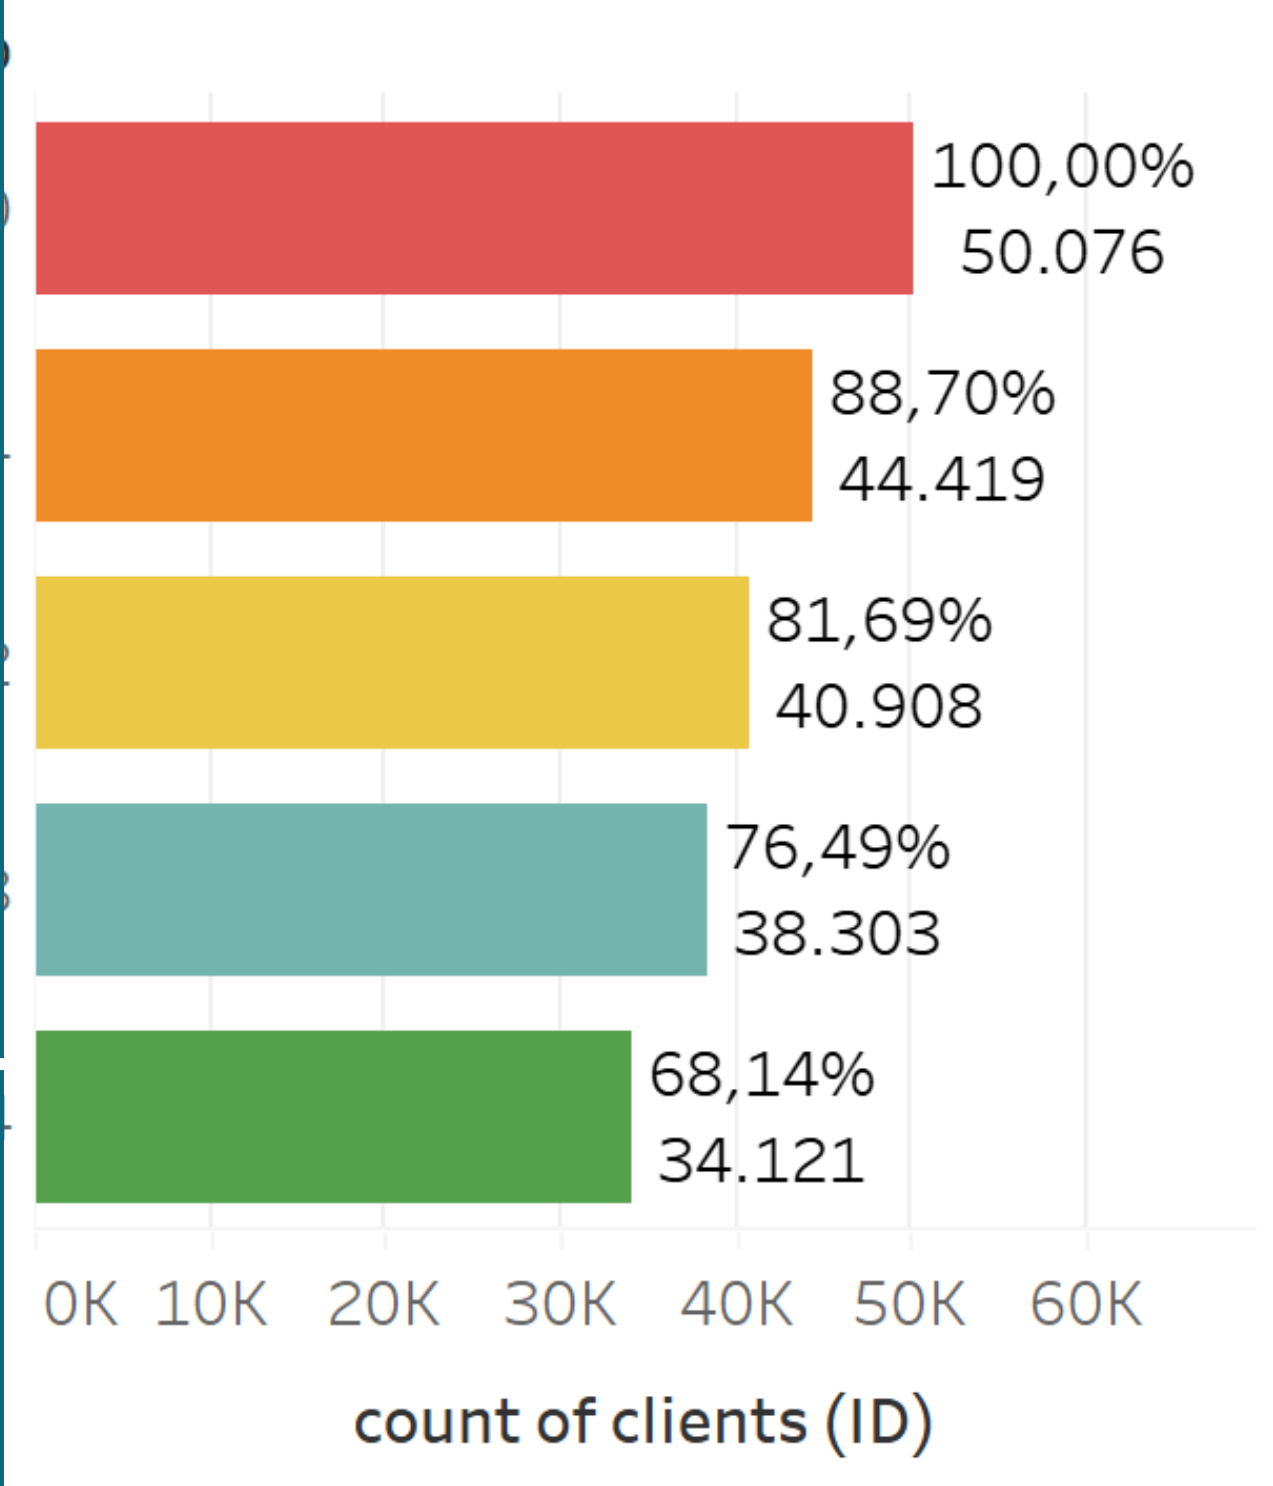

1st peak at 6.5 years

2nd peak at 16 years

# Key Performance Indicators

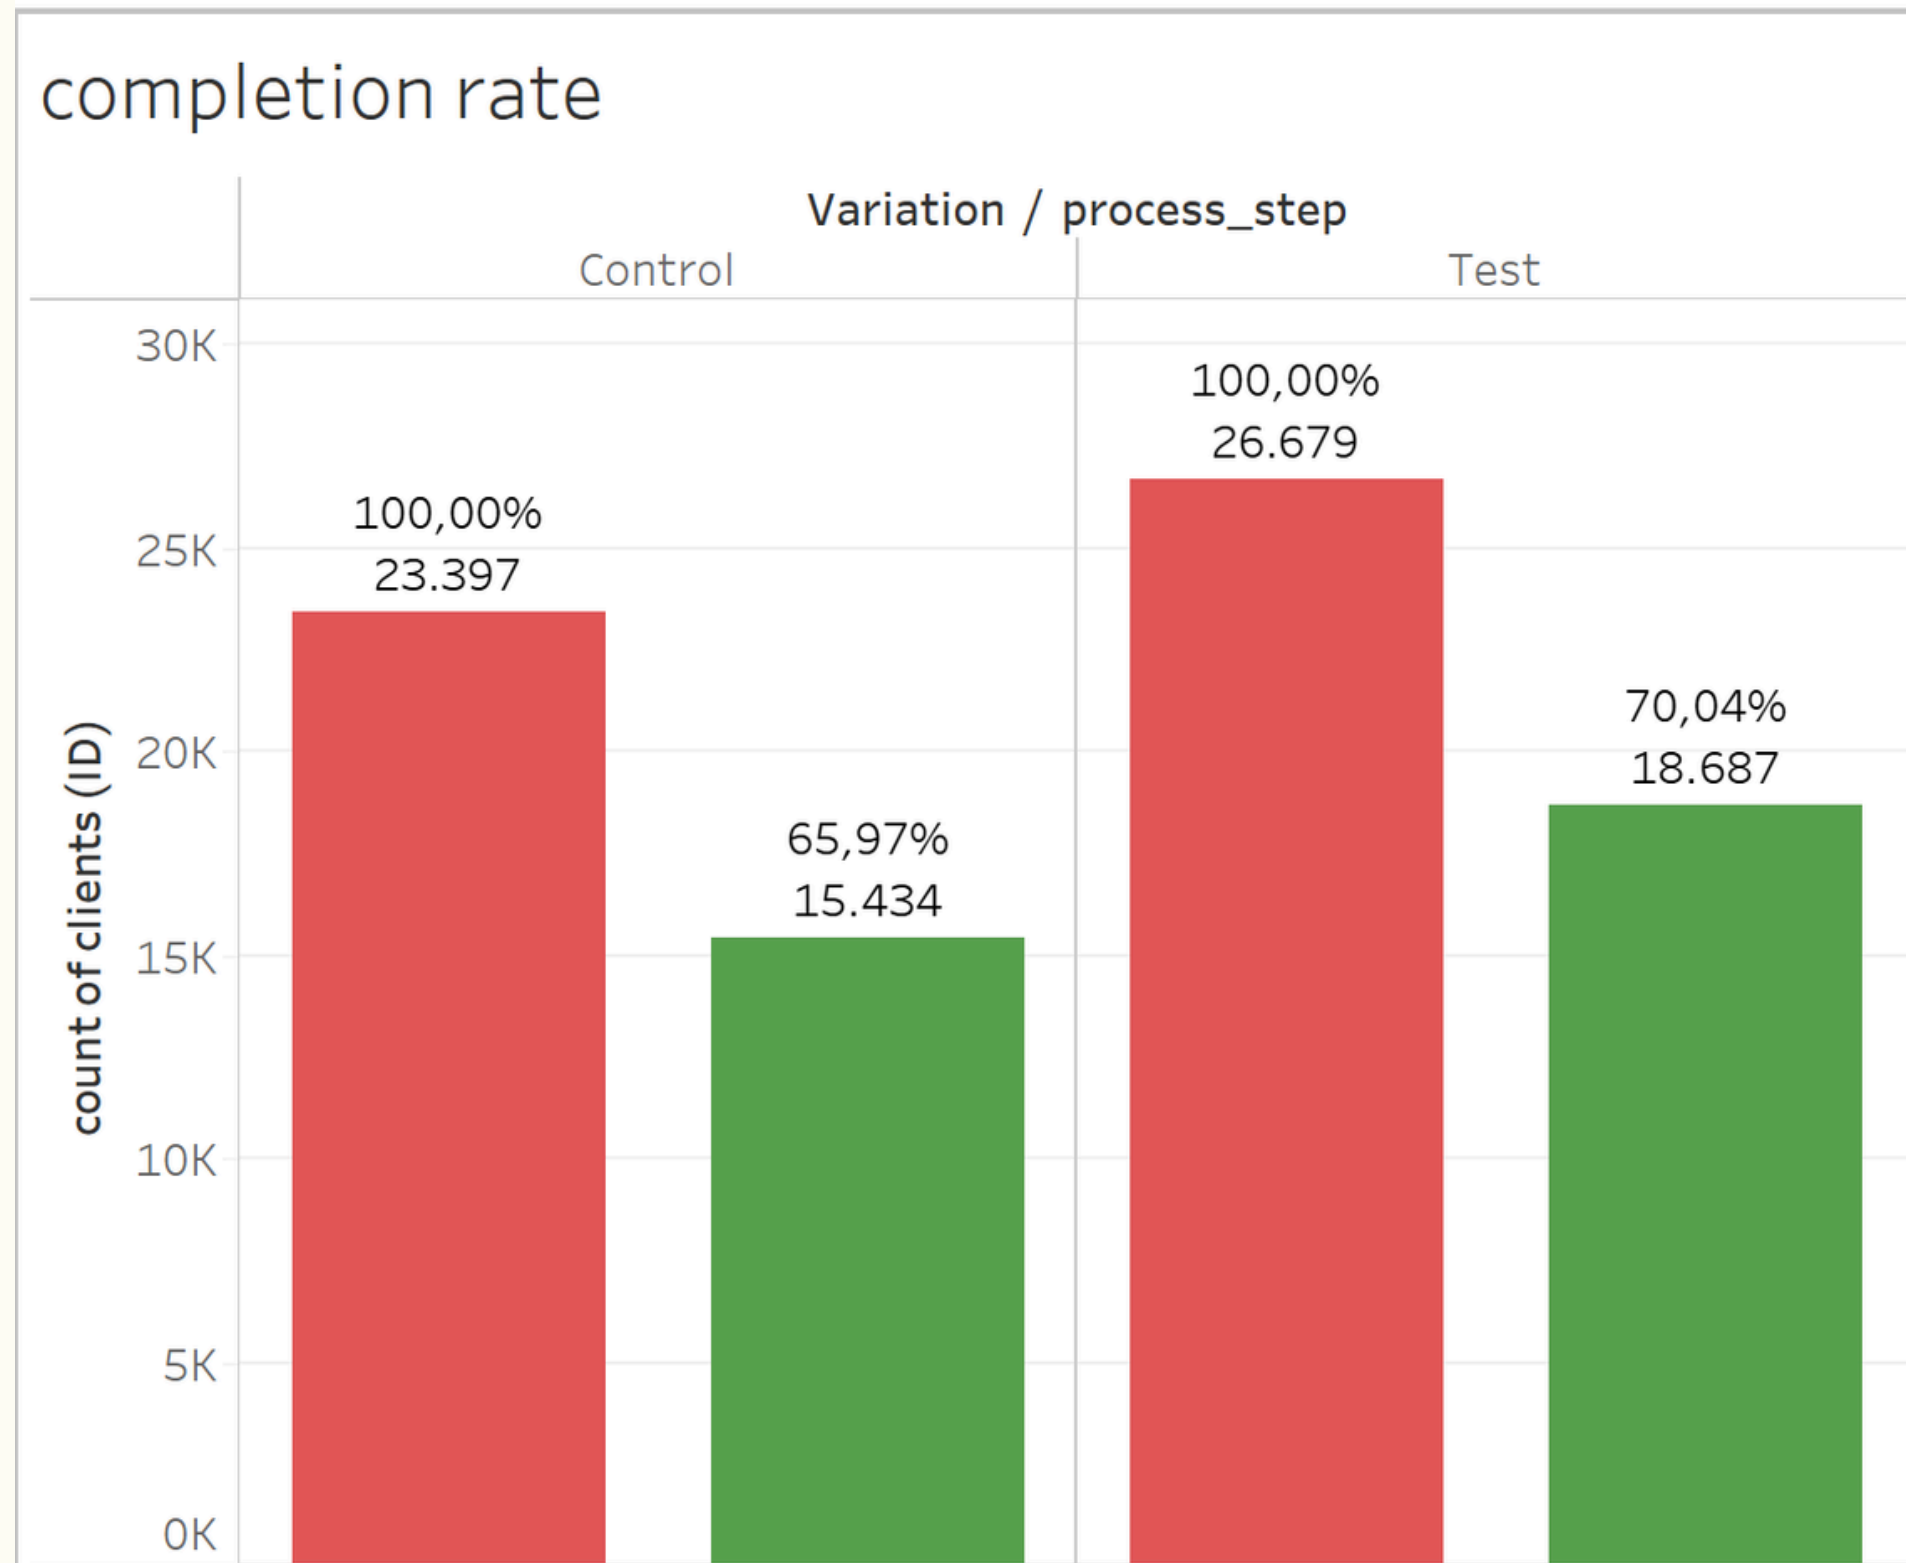

process steps:

# Key Performance Indicators

Completion rate control group: 65.97 %

Completion rate test group: 70.04%

- 4% more of processes were completed
- Z-Test p-value near zero.
- With effectiveness threshold (5%) Z-Test p-value goes up to 0.96.

# KPI: Error Rate

## Error Rate

- Slightly higher Error Rate 20.46% vs. 18.25%
- Z-Test confirmed this as a significant difference.
- (H0: no difference between control and test groups can be dropped)

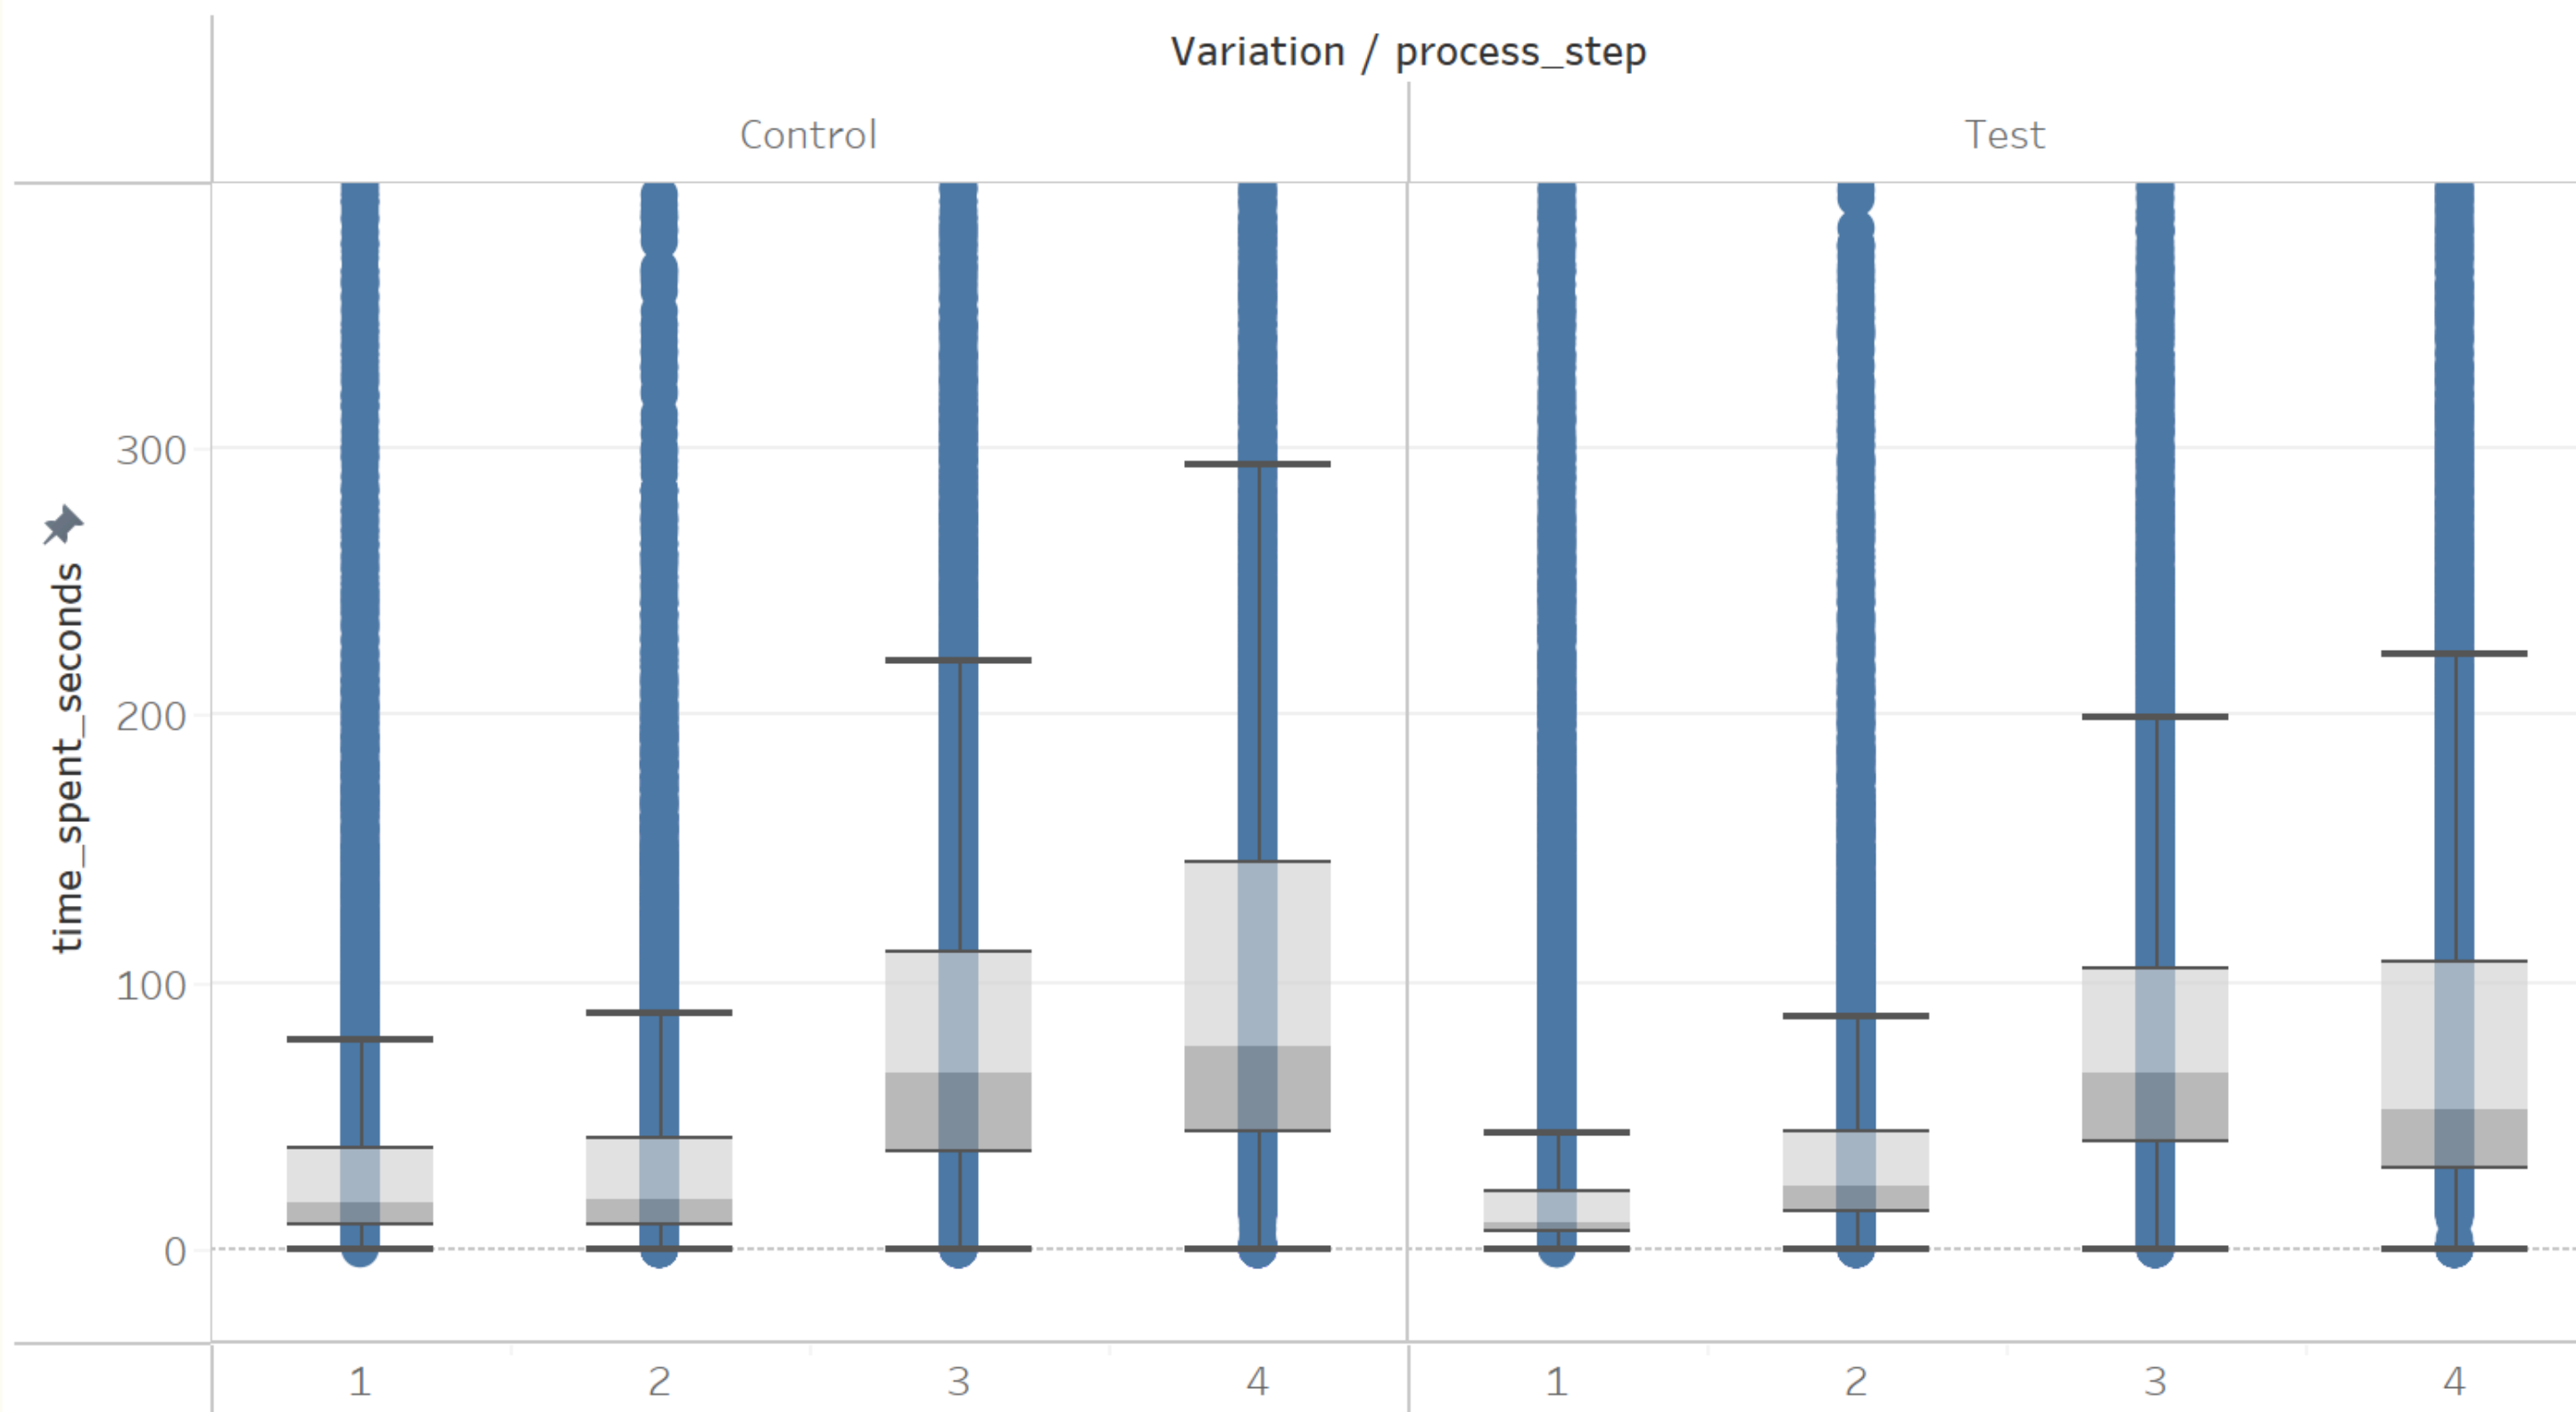

# KPI: Average number of steps per client

- Mann-Whitney U Test: Because the values aren't normally distributed
- P-value:  $8.7e-38$
- Control mean: 6.1
- Test mean: 6.6

# KPI: time spent per process step

time\_spent\_negremo

time spent on  
each process step  
is increasing with  
process step  
number

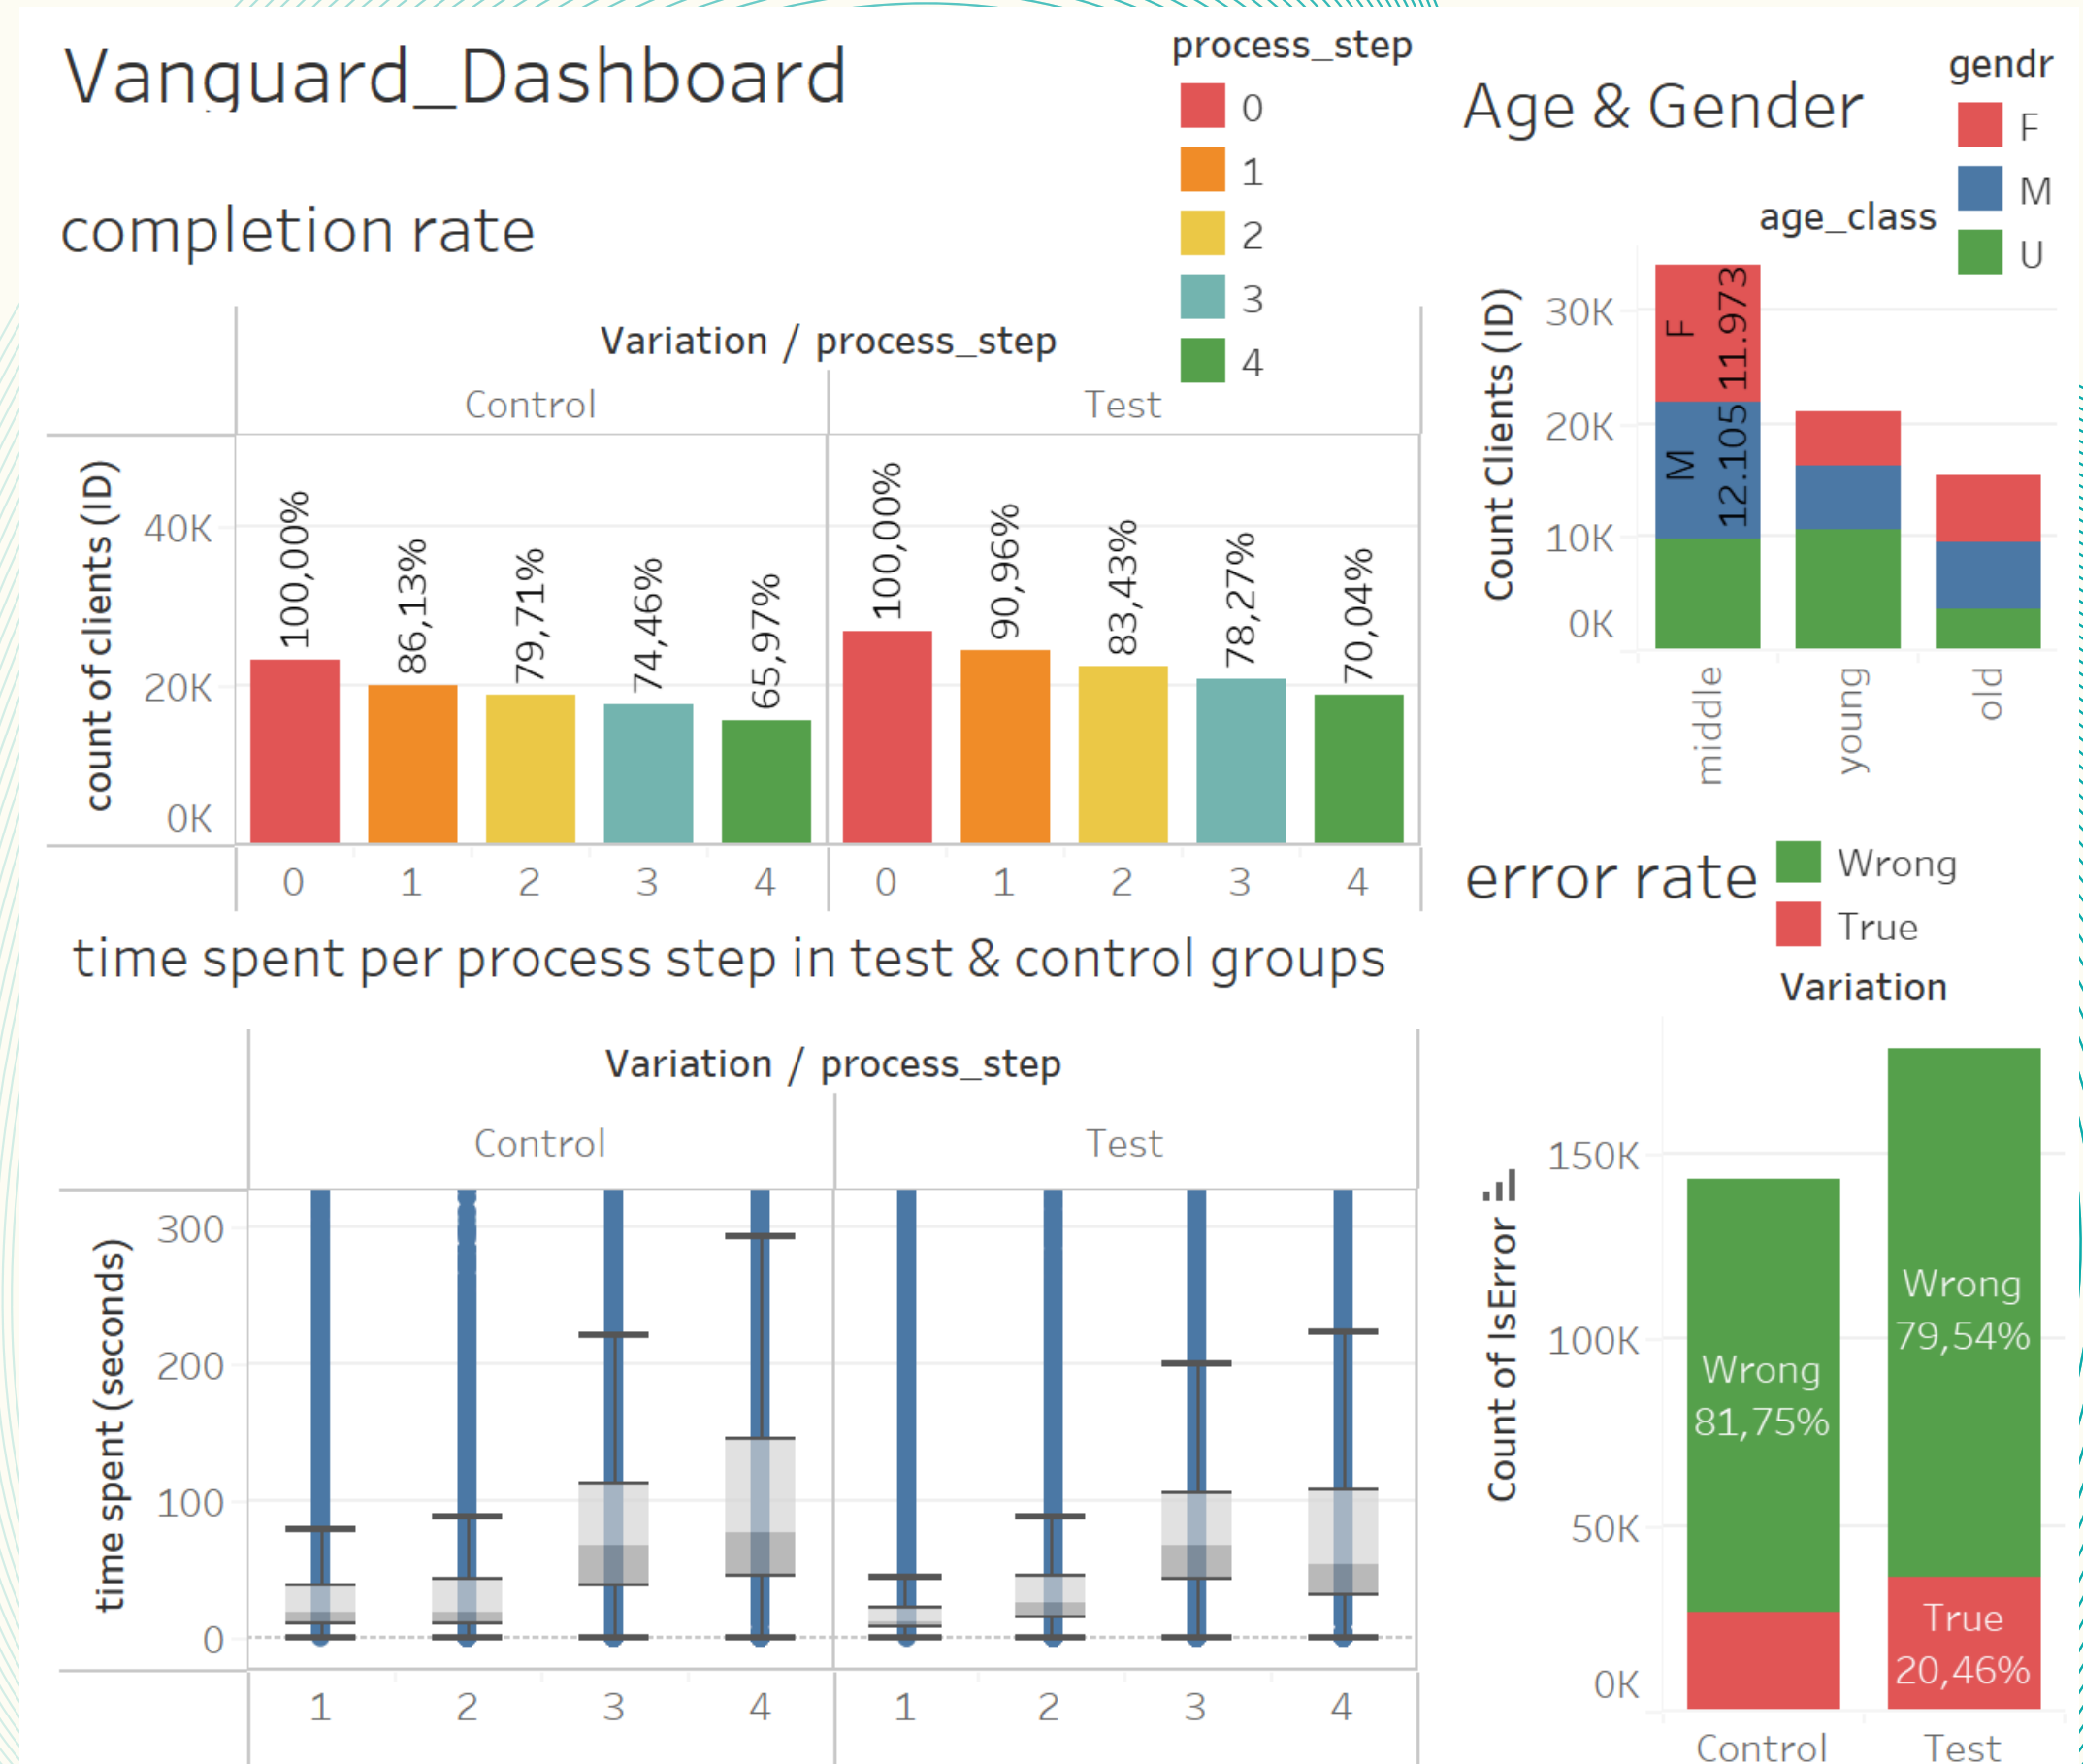

test group  
completes process  
steps faster than  
control group

# Tableau Visualization: interactive dashboard

interactive dashboard on  
Vanguard demographic data  
generated and can be  
demonstrated

# Vanguard Experiment Evaluation Dashboard in Tableau

Experiment duration: 3 months

Vanguard Evaluation Dashboard

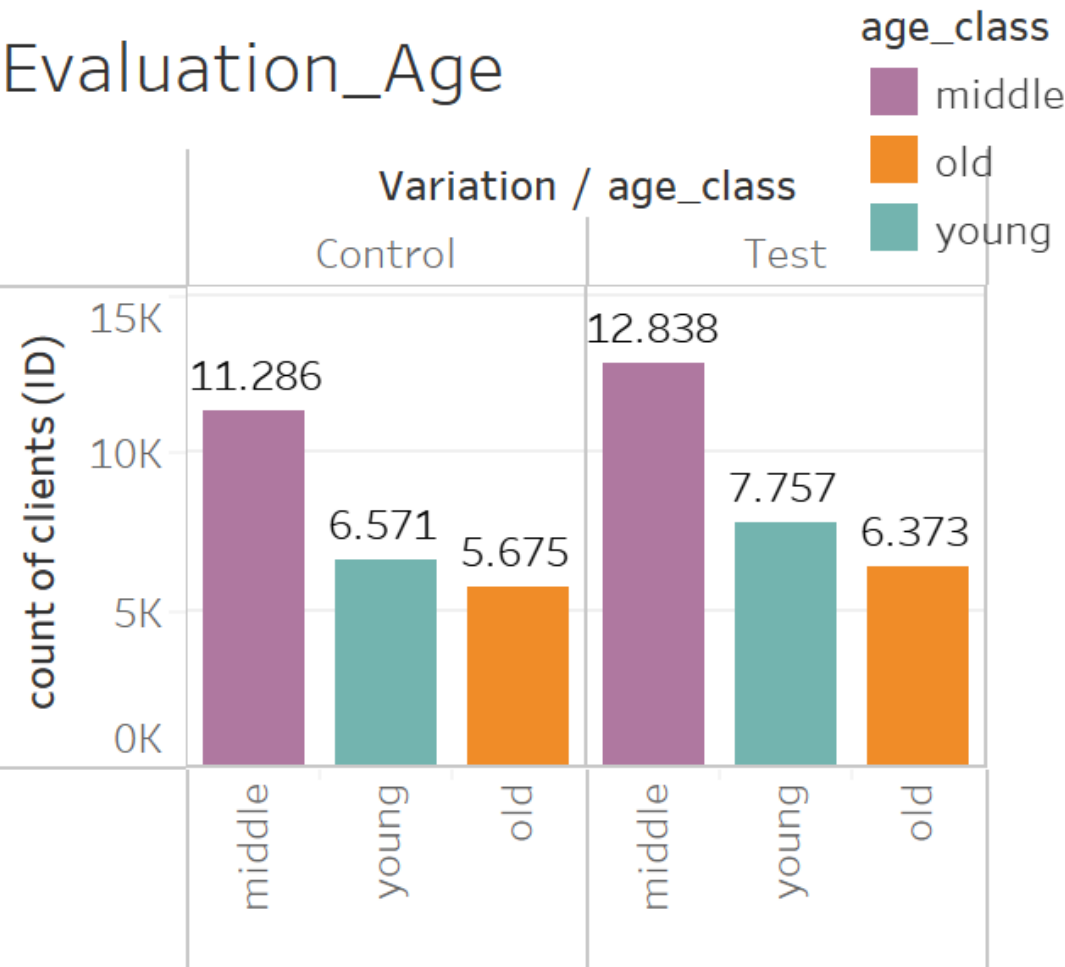

Gender distribution in test vs. control group

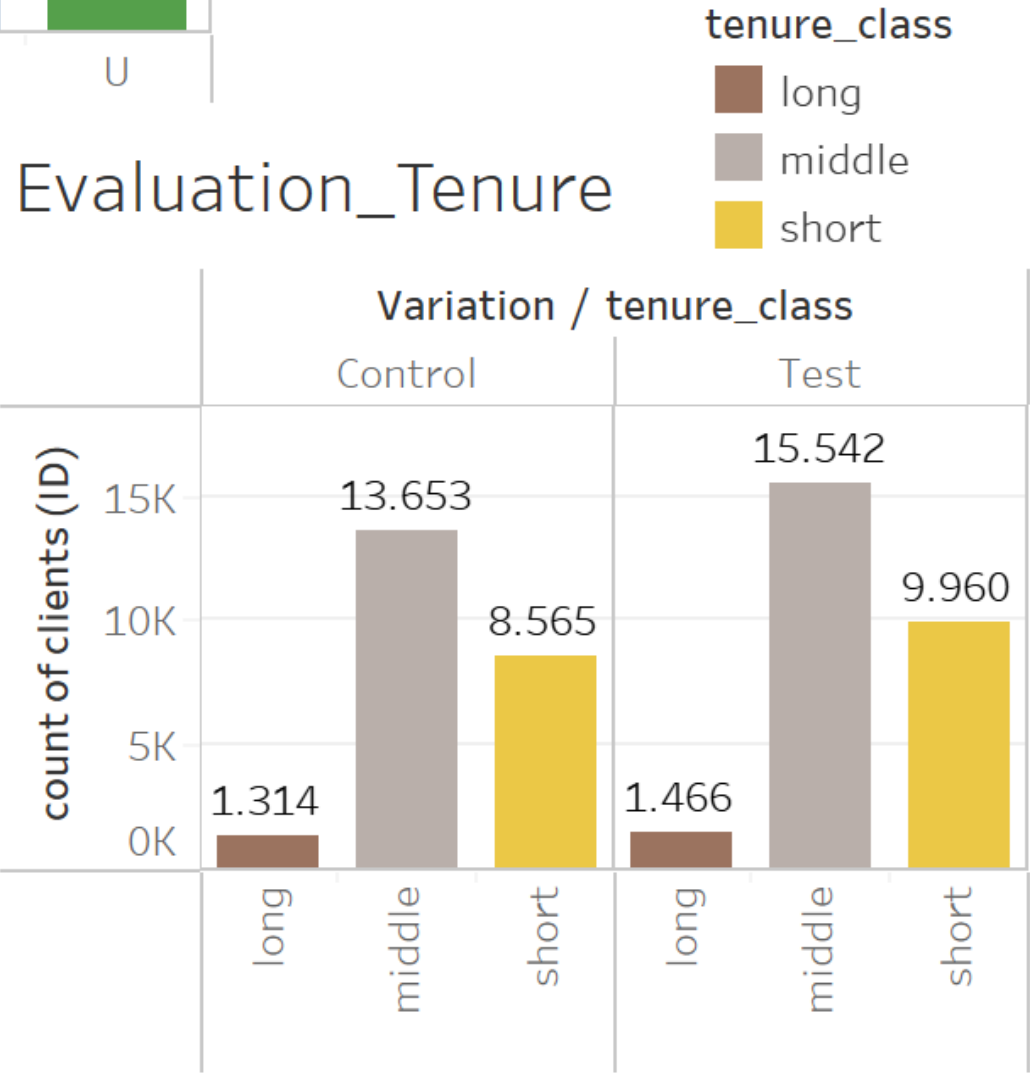

Age classes:  
young: <= 35 years  
middle: 35 - 50 years  
old: > 60 years

tenure groups:  
short: 30-100 months  
middle: 100-300 months  
long: 300-750 months

# Teamwork & Project Management

all tasks were split between us:

- data cleaning, KPI analysis, statistical analysis, tableau visualization, presentation preparation.

collaboration and project management strategies:

- Canva as project management tool
- GitHub as data transfer tool

# Challenges & Learnings

## Challenges:

- data import to tableau
- learning to use tableau

## Learnings:

- tableau can only deliver good insights if the data is high quality
- data cleaning is crucial

# KEY FINDINGS

1

Valid data set to answer the question

2

New UI has higher completion rate

3

New UI is speeding up the process

4

error rate is higher in new UI

# CONCLUSION

The new digital interface is more effective than the old, however the threshold effectiveness was not achieved

but can still be improved as the error rate has increased.

The background features a dark teal color with abstract white line art. On the left, there are several horizontal, stepped lines that resemble a circuit or a stylized 'E'. On the right, there are concentric, wavy lines that create a ripple effect, centered around a small white dot.

# Thank You !
